Summary

AI Engineer and final-year Artificial Intelligence student at COMSATS University with hands-on experience building RAG applications, voice AI agents, and deep learning systems. Skilled in developing AI-powered applications using Python, FastAPI, LangChain, and LangGraph. Have worked remotely with international clients since 2022, delivering chatbot solutions and supporting e-commerce operations. Recently developed and deployed a voice ordering agent for a restaurant client.

Skills

Languages: Python, JavaScript, C++, Java, SQL
AI and ML: Machine Learning, Deep Learning, NLP, Computer Vision, Transfer Learning
Generative AI: RAG, LangChain, LangGraph, FAISS (Vector Databases)
ML Libraries: PyTorch, TensorFlow, Scikit-Learn, NumPy, Pandas, Matplotlib
Chatbot, Voice AI and Automation: Vapi, Retell AI, Tidio, Make.com, Airtable, Webhooks
Backend: FastAPI, Node.js, Express.js
Databases: MongoDB, SQLAlchemy, Alembic
Tools: Docker, Docker Compose, Git

Projects

Blocksmith: 2D Images to 3D Minecraft Builds (Team FYP) | *PyTorch, VQ-VAE, DINOv2, Blender* 2026

- Scraped Minecraft build websites for schematic files, images and metadata, and built a dataset of 2,052 builds, each paired with its 3D voxel grid.
- Loaded each build in Minecraft, set up its multi-view camera angles manually and validated the images and schems.
- Currently training Stage 2, a DINOv2-based multi-view image encoder that connects to the frozen VQ-VAE decoder and produces .schem files that load in Minecraft.

Restaurant Voice Ordering Agent (Client Project) | *Vapi, Retell AI, Make.com, Airtable* 2026 | Code

- Built a phone agent for a restaurant client that answers questions, recommends menu items and takes orders over a live call.
- Used function calls to capture order items, delivery address and customer preferences, then logged orders and reservations to Airtable through Make.com webhooks.
- Deployed the agent on Vapi and delivered it to the client's representative.

Document Q&A Chatbot with RAG | *LangChain, FAISS, FastAPI, Streamlit* 2025 | Code

- Built an app that answers questions over uploaded documents using LangChain and FAISS, with a FastAPI backend and a Streamlit interface.
- Split documents into chunks, created embeddings and retrieved the closest passages so each answer is grounded in the source text.

Experience

Fiverr Remote
Freelance Chatbot Developer *2023*

- Built a customer chatbot with Tidio and installed it on a client's website.

Amazon Marketplace (USA) Remote
Virtual Assistant (Freelance) *Feb 2022 – Apr 2023*

- Worked remotely with clients based in Canada and the UK to run their wholesale business on the Amazon US marketplace.
- Searched profitable products and contacted US brands and distributors to open wholesale accounts.
- Created and fixed product listings, tracked inventory and handled Seller Central to keep the account in good standing.

Education

COMSATS University Islamabad, Lahore Campus Lahore, Pakistan
Bachelor of Science in Artificial Intelligence, CGPA: 3.66 *2023 – 2026*
